F05 — Executive Investment Decision Note

PSS Acceptance 360 | Prepared 19 October 2026 | Prospectus for future authorised internal discussion

NOT AN APPROVAL SUBMISSION; NOT ISSUED BY PSS. All roles below are *proposed* governance responsibilities.

1. Suggested management decision

Recommend a future, bounded feasibility mandate only if appointed management authorises it. Do not authorise technology procurement, bank commitments, production integration, SoftPOS rollout, merchant tariffs or full commercial development on the current evidence.

2. Economic question

Can PSS offer a bank-scoped merchant payment reconciliation, exception and adapter service with credible contracted bank demand, positive bank net economic value, verified contribution margin, after-tax cash NPV above the CFO hurdle, affordable downside funding exposure, and clearance of technical, cyber, legal and regulatory blockers? Any missing mandatory component means investment readiness has not been demonstrated.

3. Decision alternatives to preserve

Alternative	Fair-test requirement
B — Operate + Connect	Measured bank value and authenticated event streams; life-cycle vendor, integration and security costs
C — PSS Pay-led	Commercial reuse, device/certification status, adoption and bank acquiring requirements
D — Partner-led	Net fee margin, contract controls, service continuity and exit economics
A — Full suite	Complete technical, compliance, operational and cash exposure; no network-effect shortcut
E — No new spend	Avoided capital, BAU costs and opportunity cost under the same counterfactual

4. Investment non-negotiables

- V03: bank economic buyer, validated baseline and a commercially meaningful commitment.
- V05/F04: independent PSS costs and bank economic benefits—both must pass.
- F02/F03: service-specific security, technical capability, licence and data permission.
- F05: source-backed 60-month after-tax ETB cash flows; treasury funding and severe downside.
- P04/S02: options compared, related parties independently benchmarked; no automatic supplier.
- Audit/Risk: independent evidence challenge, recorded approvals and quantitative stop criteria.

5. Accountability and proposed timing

Workstream	Proposed owner	Condition before action
Validate bank business case	Business sponsor + bank economic buyer	Written authority; no unauthorised bank contact
Collect cost / system evidence	Technology/Operations + Finance	Approved data access, minimisation and controls
Challenge tax, capital and FX	PSS CFO + Treasury + Tax	Actual invoices, policy and contract evidence
Clear regulatory dependencies	Legal + Compliance + CISO	Current licences, contracts and standards
Decide investment	Executive Committee / Board	CFO recommendation and independent assurance

6. Proposed resolution language — for future consideration only

“Management authorises preparation of a capped PSS Acceptance 360 feasibility validation plan, subject to normal delegation, financial controls, privacy permissions and procurement rules. This mandate does not approve a product launch, vendor award, commercial tariff, production integration, bank pilot or capital investment. A further decision will require CFO-verified after-tax economics, validated bank demand, independent challenge and evidence that all applicable legal and cybersecurity requirements have been met.”

Evidence status at drafting

Signed bank commitments: 0 verified. Finance-approved input assumptions: 0 verified. Feasibility gates: 0 cleared. NPV, IRR, peak cash funding and project payback: not yet determinable. All figures in the companion workbook must originate from authorised source evidence or be explicitly marked as non-decision scenarios.

7. Proposed evidence review form — leave blank until authorised

Test or document	Proposed reviewer	Evidence status / reference
Bank demand and buyer unit economics	Commercial / Bank CFO	_____
CAPEX, OPEX, contracts and FX	PSS CFO / Treasury	_____
Cyber, systems and technical reuse	Technology / CISO	_____
Regulatory, privacy and licence scope	Legal / Compliance	_____
Alternative A–E risk-adjusted costs	Strategy / Procurement	_____
Independent challenge and dissent	Risk / Internal Audit	_____

8. Decision outcome — not selected

Decision category: [ ] Research mandate only [ ] Return for more evidence [ ] Defer [ ] Reject [ ] Revised investment paper requested.

Research budget ceiling (ETB): _____ Decision date: _____

Review authority/name: _____ Approval reference: _____

Conditions, dissent and stop triggers: _____

This form intentionally has no signatures or filled approvals. No external bank/vendor outreach should proceed on its basis without institutional authority.
