PSS ACCEPTANCE 360

P01 — Product Requirements & Service Catalogue

Pre-access design baseline • Not an approved PSS product specification

19 October 2026 | Version 1.0 | Confidential working draft

Prepared as a proposed research and product-development instrument for future PSS management review.

DECISION POSITION: develop a bank-sponsored merchant-operations and connectivity minimum scope for validation; do not authorise a production deployment on this document alone.

Control field	Recorded state
Document ID	P01 / Acceptance 360 / v1.0
Status	Proposed; pre-appointment; not institutionally reviewed
Document owner (proposed)	Research, Product & Business Development
Required reviewers after appointment	Technology, Operations, CISO/Risk, Legal/Compliance, Finance, lead bank
Evidence cut-off	19 October 2026; public sources + prior analytical drafts
Data classification	No internal PSS records or bank personal data included
Authority boundary	No bank outreach, spending, integration or certification assertion authorised

Document guide and interpretation

Read sections 1–7 for the proposed value proposition, service boundaries and journeys; sections 8–13 contain controls, acceptance tests, release and approval conditions; Annex A contains the full requirement register. The companion workbook is the live, editable system of record for proposed requirements and evidence status.

Evidence label	Use in this document
Public verified	Claim checked against regulator, standards-body or government source
Company-reported	Public company announcement; contract, current operating scope and performance unverified
Derived/inference	Analyst conclusion from referenced evidence; not a current PSS asset
Proposed requirement	Recommended target behaviour; not built, purchased, contracted or approved
Gate blocker	Required validation before pilot/investment permission

Management summary

P01 translates S01 and S02 into testable user, service and control requirements. The entry hypothesis remains Option B: a bank-paid merchant-operations utility (OPERATE) with governed, reusable interfaces (CONNECT). PSS Pay expansion (ACCEPT), partner-led delivery and business-as-usual remain valid counter-options. This document deliberately avoids designing a replacement national switch, a new QR scheme, a bank ledger or a shared agent network.

Recommendation	Scope and qualification
Design candidate minimum scope	Bank merchant entitlement references; transaction evidence ingestion; source-backed outcome states; reconciliation exceptions; bank-scoped workflows; adapter governance; audit/metering
Separate technical proof	Synthetic integration and source-message tests before any live connection
Conditional channel reuse	PSS Pay/POS/gateway only where licences, certifications, vendor rights and bank sponsorship are evidenced
Not approved	National rollout; credit/KYC automation; custody/escrow; settlement decisions; new agent network; automatic scheme participation

1. Product intent and measurable buyer jobs

Primary paying customer: sponsoring acquiring or merchant-services bank, not an assumed direct merchant fee payer. Primary product jobs: reduce time and manual effort to investigate payment uncertainty, reconcile bank and source records, service merchants and integrate channels. Merchant-facing experiences are subordinate to the bank-owned acquiring relationship and product-level consent/contractual controls.

Bank job to be done	Expected measurable proof	Evidence still missing
Know whether a payment occurred	Correctness and speed of source-backed status against bank/rail truth	V05 status logs, V03 buyer data
Close reconciliation exceptions	Hours per unmatched item, ageing and close rates	Bank baseline and reference transactions
Connect each merchant channel	Integration time, reuse ratio, change/incident effort	S03 vendor rights and adapter inventories
Prove service economics	Labour saved + support benefit versus fees and integration costs	CFO baseline, signed indicative prices

2. Product family: service catalogue

Module	Proposed service / buyer	Phase	Evidence caveat
OPERATE	P0 candidate — Bank ops; merchant support	P0 candidate	Proposed - not an existing PSS service
CONNECT	P0 candidate — Bank integration; PSS integration	P0 candidate	Proposed; bank, rail and licensing access unverified
ACCEPT	Conditional P1 — Merchant; acquirer	Conditional P1	PSS Pay reported; operational fit and certification unverified
GROW	P2 / defer — Merchant; bank product	P2 / defer	Concept only; no credit decisioning or data repurposing
AGENT	Out of scope — Licensed agent network	Out of scope	No new PSS agent network or cash-in/out in initial scope

OPERATE — Merchant operations and evidence

Intended users: Bank ops; merchant support. Proposed scope: Normalised payment status; matching; exceptions; audit; operational reporting. Status: Proposed - not an existing PSS service.

CONNECT — Bank and rail connectivity

Intended users: Bank integration; PSS integration. Proposed scope: Configurable bank adapters; canonical event contract; status ingestion; error resilience. Status: Proposed; bank, rail and licensing access unverified.

ACCEPT — Acceptance channels

Intended users: Merchant; acquirer. Proposed scope: PSS Pay / SoftPOS reuse, existing POS and applicable QR channels. Status: PSS Pay reported; operational fit and certification unverified.

GROW — Merchant value-added services

Intended users: Merchant; bank product. Proposed scope: Business statements; opt-in insights; non-credit merchant utilities. Status: Concept only; no credit decisioning or data repurposing.

AGENT — Shared-agent services

Intended users: Licensed agent network. Proposed scope: Later potential integration with authorised shared-agent utility. Status: No new PSS agent network or cash-in/out in initial scope.

3. Explicit product exclusions

- Do not create or replace EthSwitch rails, EthQR scheme rules or card-scheme authorisation.
- Do not present PSS as holding deposits, performing bank KYC, making credit decisions or declaring bank settlement finality.
- Do not permit unsupported card credential storage or cross-bank pooling of personal/merchant information.
- Do not assume the announced PSS Pay or gateway product is ready for a new channel or use case without current evidence.
- Do not add cash-in/cash-out agent network, lending engine, marketing data marketplace or national financial inclusion rollout to the first release.

4. Roles and operating boundaries

Actor	Accountability in proposed service	Proof / limit
Sponsoring bank	Approves merchants and accounts, contracts for service, performs bank risk/KYC decisions, provides ledger and settlement evidence	Signed service terms and decision owner
PSS as licensed operator	Performs contracted processing/operations; complies with its own operator licence, PCI/security and service obligations	Licence-to-function mapping and operator RACI
EthSwitch / schemes / other providers	Operate external rails or scheme rules subject to actual access contracts	Cannot be presumed integrated
Merchant	Uses approved channel and sees reliable status with clear uncertainty guidance	Bank-endorsed UX, consent and complaints process
PSS Trading / vendors	Optional independently procured technology provision, only under approved commercial/technical contract	Related-party and IP/license review
NBE / supervisory authority	Regulatory oversight as applicable; no inferred approval	Legal review, regulator clarification where needed

5. User personas and prioritised journeys

Persona	Problem	Minimum experience
Bank operations officer	Unmatched transaction, uncertain outcome, ageing case	Evidence lookup; case owner; reconciliation view
Bank acquiring/product owner	Merchant activity, incident trends, unit cost and service quality	Service catalogue; KPI and merchant cohort analytics
Bank finance/reconciliation analyst	Close-of-day bank/rail/merchant reconciliation	Export matches/unmatched; adjustment governance
Merchant or cash-desk employee	Can I release goods? Is the payment complete?	Simple confirmed/pending/failed guidance
PSS operations analyst	Escalate integration failures without leaking other banks	Bank-scoped diagnostics, runbooks, handoffs
Compliance, risk or auditor	Who did what, when and on whose authority?	Tamper-evident logs, retention and audit exports

J01 — Merchant enrolled

Bank approves merchant, sends merchant reference and entitlements, PSS verifies scope and sets service active

Control: Bank-owned KYC evidence and PSS service entitlement, no PSS KYC approval

J02 — Payment event observed

Rail/bank produces response, connector ingests event, canonical state updated, merchant sees source-backed outcome

Control: Duplicate and conflicting messages retained as evidence

J03 — Uncertain payment

Transport timeout or conflicting response creates indeterminate status, operator/merchant receives guidance

Control: No optimistic success or re-initiation without authoritative bank workflow

J04 — Day-end reconciliation

Source and bank ledger files/event stream matched; unmatched items assigned with ageing and audit trail

Control: No auto-write-off; settlement and authorisation distinct

J05 — Reversal or refund

Bank/scheme authorised reversal event ingested and linked to original item; case updated

Control: PSS does not independently approve customer refund

J06 — Bank adapter outage

Connector quarantined; unaffected banks continue; queued events replay safely after recovery

Control: No duplicate financial request; source reconciliation after recovery

J07 — Merchant support case

Bank/PSS support verifies identity, views masked transaction, hands case off with reference

Control: Bank owns contractual merchant remedy per agreed roles

J08 — Usage metering

Contract-defined events tallied, exclusions logged, finance disputes reconciled

Control: No pricing from unapproved merchant fee or subsidy

6. Transaction and reconciliation semantics

The service must distinguish a transaction's payment state from its reconciliation state and final settlement evidence. These are separate dimensions. A payment authorisation, an issuer/acquirer event, a merchant UI notification and a bank settlement entry are not interchangeable proof.

Dimension	Example states	Authority rule
Payment outcome	Initiated / Pending / Confirmed / Declined / Reversed / Indeterminate	Only source-backed outcome may become Confirmed or Declined; conflicting evidence remains visible
Reconciliation	Not due / Unmatched / Matched / Investigating / Resolved	Matching rule cannot hide missing bank entry; overrides logged
Settlement evidence	Unknown / Bank-confirmed / Returned / Under investigation	From authorised bank / settlement actor only
Support case	Open / Assigned / Escalated / Resolved / Closed	Closure requires recorded outcome, actor and audit reason

Recommended immutable correlation fields: PSS correlation ID; bank ID and approved merchant reference; source system; external transaction reference; source event ID and timestamp; ingestion timestamp; source state; reconciliation state; bank settlement evidence reference where permitted; evidence provenance; update actor/role; schema version. The final data dictionary remains subject to Legal and bank data-sharing design.

7. Interfaces and authority-controlled integration

The default minimum scope reads authorised events and provides operational status, reconciliation and support. Financial initiation or changes to ledger balances require a separate product, licence, certified configuration and authorisation case. No adapter is considered reusable until proven by contract, data dictionary and negative-path tests.

ID / interface	Permitted proposed purpose	Critical gate
INT-01 Sponsoring bank merchant registry	Merchant reference, service entitlements, bank-owned KYC state	Evidence of lawful access, consent/legal basis, test endpoint

ID / interface	Permitted proposed purpose	Critical gate
INT-02 Bank account and settlement ledger	Settlement evidence, funding/return status, bank ledger reference	Bank finance permission, reconciliation specification
INT-03 Existing PSS switch / POS events	Source IDs, channel state, timestamps, correction/reversal	Internal architecture, contractual permission, source quality
INT-04 PSS Pay / SoftPOS source	Eligible terminal identifier, payment statuses, scheme references	MPoC/scheme scope, device and transaction proof
INT-05 PSS payment gateway	Gateway transaction IDs, authorised status, reversals	Operating scope and integration rights
INT-06 EthQR / EthSwitch	Merchant QR identifiers, transaction status, reversals	Scheme/participant permission, message rules, interface
INT-07 Wallet or account rail	Approved event/status data	Approved provider contract and data rights
INT-08 Bank service desk / CRM	Exception and dispute handoff, evidence, ticket ID	Data terms and helpdesk ownership
INT-09 Merchant notification	Source-backed status, uncertainty and next step	Channel owner, consent, cost, failure handling

8. Functional requirements — priority overview

The companion workbook stores 40 proposed requirements with owner, source, release gate and validation status. “Must” denotes an essential condition for the proposed MVP specification, not a corporate delivery commitment. “Should” is desirable for a controlled live pilot; “Could” is intentionally deferred.

Module	Must	Should	Could
OPERATE	15	7	0
CONNECT	8	3	0
ACCEPT	0	5	0
GROW	0	0	2

9. Security, quality and performance requirements

Candidate quality requirements do not assert current PSS compliance. Performance SLAs, recovery times, support windows and payment-confirmation latency remain TBD until actual baselines, volumes, bank obligations and technical architecture are established. A signed SLO matrix is a Gate 2 prerequisite.

ID	Quality domain	Required evidence / acceptance
NFR-01	Security	Least-privilege RBAC + bank tenant isolation; no direct global merchant search
NFR-02	Resilience	Recoverable processing, replay, backups; fail closed for unverified payment status
NFR-03	Integrity	End-to-end IDs, tamper-evident audit, balanced reconciliations
NFR-04	Privacy	Purpose limitation; retention and deletion schedules; controller/processor mapping
NFR-05	Device security	MPoC/CPoC/scheme/device requirements per exact SoftPOS architecture
NFR-06	Observability	Merchant/bank/rail correlation, event lags, error distributions, alerting
NFR-07	Accessibility	Plain-language unknown/failed status and accessible bank UI
NFR-08	Performance	Measure p95 end-to-end ingestion, query and reconciliation lag; limits TBD
NFR-09	Interoperability	Versioned APIs; capability-based bank adapters; no implied rail participation
NFR-10	Data residency	Hosting, backups and vendor transfer conditions approved under relevant law/contracts
NFR-11	Business continuity	Manual escalation, outage notices, merchant status uncertainty protocol

ID	Quality domain	Required evidence / acceptance
NFR-12	Change governance	Release rollback, dual-controlled configuration and immutable deploy log
NFR-13	Auditability	Exportable chain of source evidence; adjustable retention with legal sign-off
NFR-14	Commercial metering	Transparent metering, disputes and bank-billable-unit auditability

10. Data, financial and consumer safeguards

- Identify controller/processor/independent obligations by data type and agreement; carry legal basis, purpose, retention and authorised export/deletion.
- Apply bank tenant isolation to data, users, logs, metrics, backups and investigations; use masked transaction and merchant identifiers by default.
- Prohibit automatic classification of a personal-account transfer as a bank-acquired merchant transaction; preserve original source classification.
- Acknowledge unknown outcomes and connectivity loss to merchants and staff without suggesting goods release before source-backed confirmation.
- A disputed transaction must have case ownership, contractual remedy actor, clocks and evidence trail; PSS support workflow does not adjudicate bank disputes by default.
- PSS Secure / EMV 3DS Access Control Server is a distinct card-not-present authentication capability and must not be treated as proof of merchant-present SoftPOS or QR certification.

11. Acceptance criteria and verification architecture

A pilot implementation is permitted only when each high-consequence control has a test case with evidence artifact, responsible signatory and exception process. The table shows examples; the companion workbook includes 24 proposed tests.

Test	Negative/positive-path test	Evidence required
AT-01	FR-003,FR-008	Given timeout with no source confirmation, when status is requested, then Pending/Unknown is shown with escalation, no success text
AT-02	FR-005	Given duplicate event key, when ingested twice, then one logical event state and retained delivery/audit trace
AT-03	FR-012,NFR-01	Given Bank A user, when attempting Bank B merchant/report lookup, then access denied and audit event created
AT-04	FR-039	Given authorised but not settled transaction, when reporting settlement, then not settled without bank evidence
AT-05	FR-006	Given unmatched item, when matching rule executes, then exception opens with source IDs and owner
AT-06	FR-033	Given exception override request, when no independent approval, then status cannot be closed
AT-07	FR-017,FR-020	Given incompatible bank schema, when deployment requested, then release blocked
AT-08	FR-018	Given network failure, when retry occurs, then no second payment instruction is sent
AT-09	FR-025,NFR-05	Given uncertified device/app combo, when enablement requested, then blocked
AT-10	FR-027	Given QR route without approved credentials/contract, when enabled, then configuration denied
AT-11	NFR-04	Given non-essential personal field, when data mapping reviewed, then field excluded or justified
AT-12	FR-040	Given billing window, when recomputed from source events, then totals and exclusions explainable

12. Release, prioritisation and gating

Release gate	Candidate deliverable	Mandatory decision
Research baseline (now)	P01 requirements, V03/V04/V05 instruments, public market evidence, synthetic journeys	No institutional authorisation or live release
Gate 1 — Feasibility	Validated bank buyer, PSS asset audit, pricing, licences, source mapping, option comparison	Choose narrow product or reject/re-scope; no production connection
Gate 2 — Live pilot readiness	Documented adapters, cyber/legal/scheme clearance, source consistency, measured SLOs, signed bank RACI	Separate recorded permission for limited live pilot
Gate 3 — Pilot evaluation	Actual cohort usage, costs, reliability, complaint outcomes, operational savings and control breaches	Independent evaluation before expansion
Gate 4 — Commercial scale	Contracted repeatable bank demand, economics and all risk sign-offs	New investment approval; no automatic rollout

13. Commercial-measurement requirements

No pricing is established in P01. Later F05 and V03 must prove a two-sided model: PSS contracted bank revenue versus infrastructure/integration/support/certification costs; bank labour/service/merchant benefits versus PSS fees and switching costs. Billable units shall be derived from auditable rules and must exclude failed/duplicate/void transaction categories as contractually determined.

Leading operational metric	Definition to validate	Source
Exception rate	Unmatched items / eligible observed items; cohort-specific	PSS source + bank ledger
Time to resolve	Time from exception detection to verified closure	Operations queue
Status accuracy	Verified source outcomes agreeing with status shown	Bank and provider truth sample
Merchant active rate	Unique authorised merchants with qualifying actual payment activity / enrolled	Bank/rail source, not registrations
Integration repeatability	Effort to connect bank 2 compared with bank 1, adjusted for scope	Technology time and contract records
PSS margin per bank	Contract revenue less incremental delivery/support and amortised implementation cost	CFO-signed source inputs

14. Open decisions and critical dependencies

ID / issue	Evidence needed	Owner
D01	Bank paid demand — No bank proves budget and willingness to pay	V03 qualified decision maker + price/term sheet
D02	Current PSS portfolio — Actual interfaces, production scope and vendor rights unknown	S03/V05 demonstrations + contracts
D03	Licence boundaries — Original POS/gateway licence terms not reviewed	Original licences + Counsel mapping
D04	SoftPOS compliance — Correct MPoC/CPoC/scheme certified implementation unknown	Attestation/third-party listing and contracts

ID / issue	Evidence needed	Owner
D05	EthQR access — Scheme rules, rights, economics and connectivity unknown	Approved participant path and scheme rules
D06	Payment source quality — Uncertain, reversal and ledger statuses may be missing	Data-quality profiling
D07	PSS economics — Pricing, build cost, support cost, SLA liability unverified	F05 bottom-up model
D08	Data sharing — Roles and cross-bank data segregation unknown	Data agreements, DPIA and tenant security tests
D09	Bank operations responsibilities — Dispute and reconciliation owner may be unclear	Signed RACI and runbooks
D10	Product duplication — PSS gateway/POS or EthSwitch already solves core need	Comparative gap demos and competitor offers
D11	Vendor rights — PSS supplier contract disallows derivative connector/analytics	Legal vendor review
D12	Overbroad MVP — Scope creep to full acceptance or new agent network	Backlog release controls

15. Pre-appointment working plan and handover

May be prepared now	Requires PSS appointment and authority
Synthetic interface examples and schema proposals	Live endpoint access, IP/vendor contracts and payment data
Neutral bank/merchant user-journey tests with synthetic cases	Formal bank engagement and consent-governed fieldwork
Proposed control and acceptance test matrices	Actual certifications, legal sign-off, security validation
Architecture options and preliminary costing structures	Internal transaction metrics, system owner decisions, cost baseline and approved spend

Owner of the future controlled baseline should be the authorised PSS Product Owner, with formal approvals by Legal/Compliance, CISO/Risk, Technology, Finance and sponsoring bank. This pre-appointment paper is a starting design only.

Management disposition

Recommended classification: CONDITIONAL PRODUCT DESIGN HYPOTHESIS. Advance OPERATE + CONNECT to technical and bank-customer validation. Do not approve a production build, bank integration, public product claim, use of confidential data or commercial contract on P01 alone. Re-open the alternative analysis if the PSS Pay-led, partner-led or no-build path shows superior verified economics.

Annex A. Functional requirement catalogue (condensed)

ID	Module / priority	Proposed behaviour
FR-001	OPERATE / M	Map each merchant to sponsoring bank, account reference and approved acceptance channels; store verification provenance
FR-002	OPERATE / M	Assign and preserve correlation ID while storing external scheme/bank IDs separately
FR-003	OPERATE / M	Distinguish initiation, processing, confirmed/declined, reversal, indeterminate and reconciliation state; do not claim settlement from authorisation
FR-004	OPERATE / M	For every status carry source actor, event time, ingestion time, confidence and evidence ID
FR-005	OPERATE / M	Repeat receipt of same event shall not create extra financial events or duplicate cases

ID	Module / priority	Proposed behaviour
FR-006	OPERATE / M	Match authorised source files/events to bank ledger or settlement evidence using configurable rules, with unmatched queue
FR-007	OPERATE / M	Open a tracked exception with severity, owner, due date, evidence, ageing and resolution state
FR-008	OPERATE / M	Show pending/unknown when definitive source confirmation is absent, rather than claiming success
FR-009	OPERATE / M	Role scoped bank view of merchants, transactions, exceptions, reconciliation and service quality
FR-010	OPERATE / S	Search by bank-approved merchant reference and display masked status plus escalation instructions
FR-011	OPERATE / M	Append-only recorded actions with actor, timestamp, reason and evidence; detect tampering
FR-012	OPERATE / M	No bank employee can view other bank customer, merchant, transaction or exception information
FR-013	OPERATE / S	Track handoffs to authorised bank/scheme processes, deadlines, outcomes and evidence without adjudicating outside contract
FR-014	OPERATE / S	Export bank-specific operational and reconciliation reports under approved retention
FR-015	OPERATE / S	Link consent/legal basis version and customer-facing disclosure for permitted data workflows
FR-016	CONNECT / M	Use a versioned bank connector with documented input/output status fields, errors and transport controls
FR-017	CONNECT / M	An adapter cannot go live without bank endpoint, security, data, negative-path and rollback tests
FR-018	CONNECT / M	Retry transient failures with deduplication and backoff; never blindly repeat financial instruction
FR-019	CONNECT / M	Expose acknowledgement, delivery attempts and errors for each downstream status event
FR-020	CONNECT / M	Permit versioned schema evolution and backward compatibility agreed by bank
FR-021	CONNECT / S	Authorised replay of immutable historical events shall not create new payment orders
FR-022	CONNECT / M	Each bank has explicit service, route, event and role entitlements configurable only by authorised operator
FR-023	CONNECT / S	Import EthQR, card and account rails only through approved partners/interfaces and agreed scheme contracts
FR-024	CONNECT / M	Failure of one bank/adapter shall not reveal data or directly stop unrelated bank workflows
FR-025	ACCEPT / S	Enable only approved device / app / kernel / scheme configurations, after certification evidence and bank contract
FR-026	ACCEPT / S	Display only acceptance methods enrolled and contractually eligible for that merchant
FR-027	ACCEPT / S	Use scheme-authorised QR payloads and brand rules; preserve acquiring bank and merchant attribution
FR-028	ACCEPT / S	Show source-backed confirmation/unknown and explain what to do when connectivity fails
FR-029	ACCEPT / S	Associate registered device/app instance, attestation result and merchant entitlement where relevant
FR-030	GROW / C	Provide opt-in merchant metrics only from lawfully acquired data, never infer financing approval
FR-031	GROW / C	Pass customer-initiated request to licensed bank with explicit consent; PSS makes no credit decision
FR-032	OPERATE / M	Dual approval and versioned record for status maps, rules, bank entitlement, matching rules
FR-033	OPERATE / M	Any write-off, closure or override includes reason, actor and independent approval
FR-034	OPERATE / M	Distinguish personal transfer destination from formally acquired merchant account; never imply KYC completed

ID	Module / priority	Proposed behaviour
FR-035	CONNECT / M	Default MVP connectors ingest, reconcile and report; payment initiation is separate and gated
FR-036	OPERATE / S	Record handoff to bank/scheme and provide bank-level ownership and SLA status
FR-037	OPERATE / S	Expose event-level audit export to authorised bank/audit with masking and agreed retention
FR-038	CONNECT / S	Enable synthetic bank adapter and response tests without live credentials or production data
FR-039	OPERATE / M	Store bank settlement confirmation with source and finality; never derive it from payment authorisation
FR-040	OPERATE / S	Count only contract-defined billable units; supply audit-ready explanation of exclusions and adjustments

Annex B. Sources and evidence boundaries

EXT01 NBE — Draft National Digital Payments Strategy 2026-2030. Official draft policy, not enacted rule https://nbe.gov.et/ndps/

EXT02 NBE — Payment system operator register. Switch operator register entry; newer licences must be inspected https://nbe.gov.et/payment-instrument-issuers-system-operators/

EXT03 PCI SSC — Payment standards. MPoC/CPoC applicability; not proof of particular solution certification https://www.pcisecuritystandards.org/Standards/

EXT04 EMVCo — QR Codes. Global QR specification, not Ethiopian scheme membership https://www.emvco.com/emv-technologies/qr-codes/

EXT05 Ministry of Justice — Personal Data Protection Proclamation 1321/2024. Law in force; legal mapping required https://justice.gov.et/en/law/personal-data-protection-proclamation/

EXT06 PSS — PSS Secure ACS launch. Corporate-reported existing ACS, distinct from merchant present acceptance https://psseth.com/?p=7053

EXT07 PSS expansion announcement — Shega, 30 August 2026. Secondary report; licence document and certification unverified https://www.shega.co/news/premier-switch-expands-into-the-checkout-with-po-s-gateway-license

EXT08 EthSwitch — ETHQR Brand Usage Standard. National QR scheme branding; rights and full scheme rules needed https://ethswitch.com/wp-content/uploads/2024/12/ETHQR-Brand-Usage-Standard-Identity-Guideline.pdf

INT01 S01 — Pre-investment strategic case. Research hypothesis; not approved S01 prepared 19 October 2026

INT02 S02 — Options assessment. Illustrative ranking; no validated bank commercial evidence S02 prepared 19 October 2026

INT03 S03 — Capability gap assessment. Public-evidence review; internal audit outstanding S03 prepared 18 October 2026

INT04 V02/V03/V04/V05 work products. Research baselines/protocols; interviews and PSS evidence pending Prepared 19 October 2026

Annex C. Design control and sign-off record

Reviewer / decision	Recorded status	Evidence reference
Product owner	Not reviewed / pending	—
Technology/Operations	Not reviewed / pending	—
Finance / CFO	Not reviewed / pending	—

Reviewer / decision	Recorded status	Evidence reference
Legal / Compliance	Not reviewed / pending	—
CISO / Risk	Not reviewed / pending	—
Sponsoring bank	Not reviewed / pending	—
CEO / ExCo mandate	Not reviewed / pending	—
